

Cool Control Plus Opens Doors to Saving Your Hotel Money

FREE installation of a state of the art, Cool Control *Plus* “SMART” thermostat unit or power controller and infrared occupancy sensors, can save your property hundreds of dollars per room each and every year.

Generally, hotel guests aren't in the habit of turning off the air conditioning when they leave and subsequently, you are paying to cool their rooms when they aren't even there.

Automatically adjusts the temperature

and communicates with your cooling unit to tell it when your guests leave the room and then lets it know when they return. It will then return the temperature to the previous setting within 20 minutes.

Here are a few key features:

- Infrared people sensor, not just motion. Unique dual element pyro-electric infrared sensor. Continuously monitors for heat and motion.
- Hard wired directly to the thermostat for continuous communication.
- Digital signal processing continually monitors room to recognize occupancy, even sleeping people.

Energy solutions designed to save money and save energy

Free equipment • Free installation

Save money every day in every room

Cool Control *Plus* is a program benefiting hotel and motels which have Packaged Terminal Air Conditioners (PTAC) air conditioning/heating units installed. These units can have the controls on the units or have thermostats connected directly.

How the Cool Control Plus Program works:

- We install the SS2000 infrared occupancy sensor.
- We install or replace your existing thermostats with the latest technologically advanced and computerized “SMART” SS5000

SS5000

thermostat which communicates with the occupancy sensor and the existing PTAC unit. If installation of an independent thermostat is not possible, we will install the SS1000 controller unit closer to the PTAC.

SS2000

- The SS5000 thermostat constantly performs patented scientific calculations to ensure that the comfort temperature is achieved within a specified time frame upon the guest's return.

SS1000

- The microprocessor inside the SS5000 thermostat not only performs the temperature calculations, it records detailed occupancy and air conditioning/heating usage data.

- We generate savings reports twice per year showing room occupancy patterns, air conditioning/heating usage, and energy saved. This valuable information helps you control your costs and shows your annual energy savings.
