

YOU NEED A MISER TO HELP YOU SAVE MONEY

It's very simple

Your coolers and vending machines are costing you more money to run than they need to. They offer an opportunity for you to save energy and subsequently, money. By plugging your vending machine's power chord into a VendingMiser, you can save anywhere from \$30 to \$400 per machine a year in energy costs.

The Miser offer:

- A quick, inexpensive solution to energy savings – no need to switch out your older machines to newer more efficient models
- Longer machine lifespan – lighting and compressors
- Environmental benefits – less energy use translates to less greenhouse gas emissions

Plug in and save money

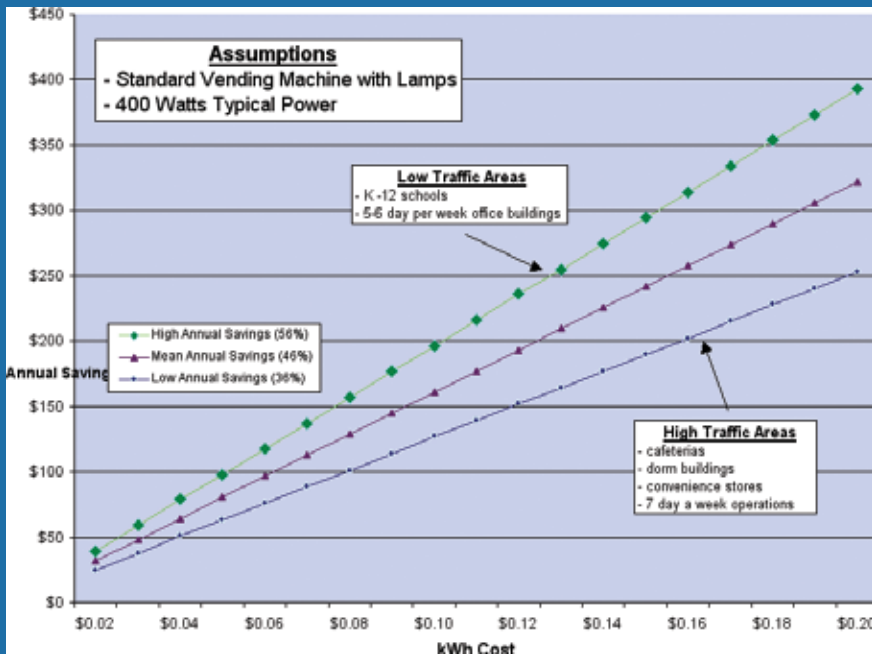

VendingMiser: Compatible with all types of cold drink vending machines, this Miser uses a Passive Infrared Sensor (PIR) to power down the machine when the area surrounding it is vacant. Then it monitors the room's temperature and automatically re-powers the cooling system at one to three hour intervals, independent of sales, to ensure that the product stays cold.

Energy Solutions for the Hotel and Motel Industry

This program is included in the Pacific Gas & Electric Company's energy efficiency portfolio and is implemented by Honeywell

PLUG IN AND SAVE MONEY

Provided by USA Technologies Inc., Manufacturer

Savings Example: If you pay 13c a kilowatt hour, in a medium traffic area you can save approximately \$200 per year on your electrical costs.

This great money and energy saving device normally retails for \$265.00

As part of the Cool Control Plus Program, you get this money saving, energy saving, Miser for FREE!

Your Major Bottlers say:

“Overall, the external VendingMiser is easy to use and provides a benefit to our customers and a benefit to the environment.” – Steve Cousins, Coca Cola North America

“This letter is an authorization for the use of the USA Technologies external energy consumption management product, VendingMiser, to be used on approved PepsiCo refrigerated vending equipment.” – Bob Spear, PepsiCo Global Procurement
